

The 5G experience.

5G will impact the world, transforming how things connect

Global 5G subscription forecast to be **1.3B** by **2023**.¹

5G can enable costs **10x** lower per gigabyte than current 4G networks.²

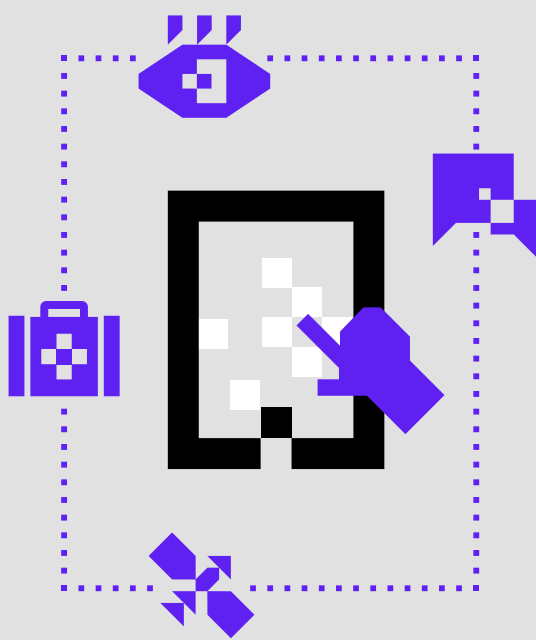

With maximum speeds up to **1,000x** faster than 4G, 5G will shift consumer behavior.³

By **2035**, it's estimated that 5G will enable **\$12.3T** of global economic output.⁴

Supporting a new realm of possibilities.

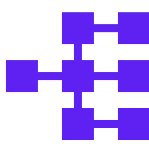

- Digital lifestyles
- Smart cities
- Connected/Autonomous cars
- Connected industries and factories
- Healthcare systems
- Smart agriculture services
- Media and communications services
- Augmented and virtual reality technologies
- Mission-critical communications

Delivering connectivity like never before.

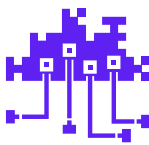

Faster speeds:
5G promises to deliver gigabit speeds.

Connectivity:
Greater number of 5G cell sites = greater connectivity.

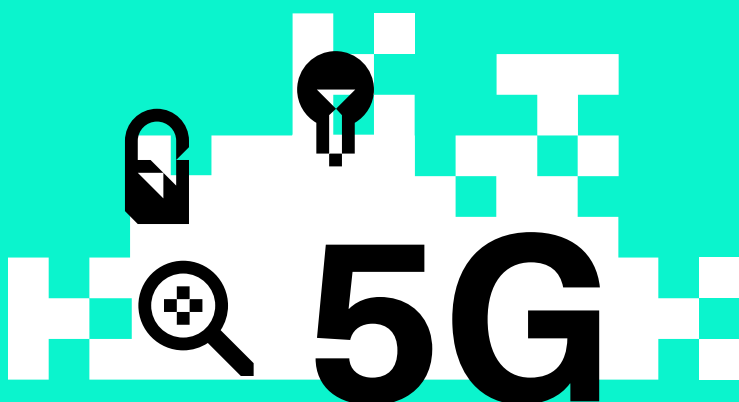

Low latency:
5G network response will drop by 10% compared to current networks.

Increased capacity:
More spectrum availability will open up bandwidth, supporting greater amounts of data and more devices.

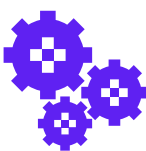

All wrapped up in IoT, 5G will...

- Enable connectivity for IoT devices
- Make IoT more secure
- Expedite the mass adoption of IoT
- Provide a ubiquitous, reliable, scalable network

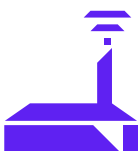

Preparing for 5G.

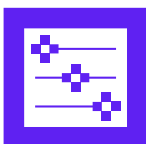

Despite all of the great things 5G is bringing, there are many challenges ahead...

Cross-industry collaboration and integration

Ubiquitous interoperability

Unifying framework

Global roaming

The Syniverse advantage.

Syniverse is uniquely positioned to help mobile operators overcome these challenges and more. As a leader in the industry for 30+ years, we've been through it all. Leading the way for 2G, 3G, 4G and everything in between, we're here to help you deliver on the promise of 5G.

Meet with us at [MWC Barcelona](#) or reach out to us at contact@syniverse.com to find out how you can get your business ready for 5G.
